## **A. Ph.D. Dissertation**

**Subject of dissertation:** “The effects of deep brain stimulation (DBS) in adulthood or in adolescence on behavioral and brain abnormalities in the offspring of dams exposed to gestational immune stimulation”.

In my dissertation I presented results (behavioral, Imaging, and histology) regarding the treatment and prevention in a Schizophrenia rat model, using deep brain stimulation in 3 main brain areas (the nucleus accumbens, medial prefrontal cortex, and dorsolateral thalamic nucleus). My project was funded by Era-Net with collaboration of 5 other labs (European and Canadian), and resulted in 2 papers so far.

**Dissertation work was supervised by:** Prof. Ina Weiner.
